(a) Observed impacts of climate change on ecosystem
Changes in ecosystem structure
Species range shifts
Changes in timing (phenology)
Terrestrail Freshwater Ocean
Ecosystems
Global
Africa
Asia
Australasia
Central and South America
Europe
North America
Small Islands
Artic
Antartic
Mediteranean region
Tropical forests
Mountain regions
Deserts
Biodiversity hotspots
na
not assessed
Confidence in attribution to climate change
High or very high
Medum
Low
Evidence limited, insufficient
na Not applicable
Impacts to human systems in panel (b)
– Increasing adverse impacts
± Increasing adverse and positive impacts
(b) Observed impacts of climate change on human system
Impacts on water scarcity and food production
Impacts on health and wellbeing
Impacts on cities, settlements and infrastructure
Water scarcity
Agricultre/ crop production
Animal and livestock health and productivity
Fisheries yields and aquaculture production
Infectious diseases
Heat, malnutrition and other
Mental health
Displacement
Inland flooding and associated damages
Flood/storm induced damages in coastal areas
Damages to infrastructure
Damages to key, economic sectors
Human systems
Global
Africa
Asia
Australasia
Central and South America
Europe
North America
Small Islands
Artic
Cities by the sea
Mediteranean region
Mountain regions
