
Acidification
Corrosive impact of pollutants (SO_2; NOx) on soil, water, ecosystems, buildings.

Climate Change
Radiative forcing of GHGs causing rising temperatures, sea level rise, extreme weather events.

Cumulative energy demand
Total energy use along the production chain.

Eutrophication
Impacts of nutrients (N, P) on soil and water quality affecting ecosystems and drinking water.

Freshwater aquatic ecotoxicity
Impacts of toxic substances on freshwater aquatic ecosystems.

Human toxicity
Impacts of toxic substances on human health, either by inhalation or via the food chain.

Land use
Land surface used to produce the resource.

Photochemical oxidation
Impacts of tropospheric ozone from air pollutants (VOC, CO), sometimes visible as smog.

Terrestrial ecotoxicity
Impacts of toxic substances on terrestrial ecosystems.
