Incremental innovation → Radical innovation

Advances on traditional materials and existing characteristics	New material combinations and multi-functional characteristics	Innovative materials with entirely new functionality
100% recyclable vinyl flooring	Lightweight ceramic combining fast-hardening cement & organic fiber	Rain-absorbing roof-mats, respiration-like, reducing air-condition costs
Neopor - 20% improvement in insulation	Self-heating concrete w/ added bacteria, 50% life-time cost	Micronal - intelligent temperature management
Coated steel, very durable, no need for genotoxic Cr(VI)	Concrete admixed w/ special chemicals, 50% faster curing time	Supper repellent surfaces, inspired by certain plants

Market-ready

- Higher recyclability/reusability
- Reduced life-cycle costs
- Reduced material costs
- Faster construction process
- Higher energy efficiency
- Improved health/well-being

Early development\pilot phase

- Reduced life-cycle costs
- Higher energy efficiency
- Improved health/well-being
